Pedro

Why does everyone relate to one another?

Pedro

Almost like we both adopted the same traits!

EVOLUTION

EVOLUTION

gradual process by which species change over time,
leading to adaptations that enhance survival and
reproduction in their environments

Evolutionary Theory on Gender

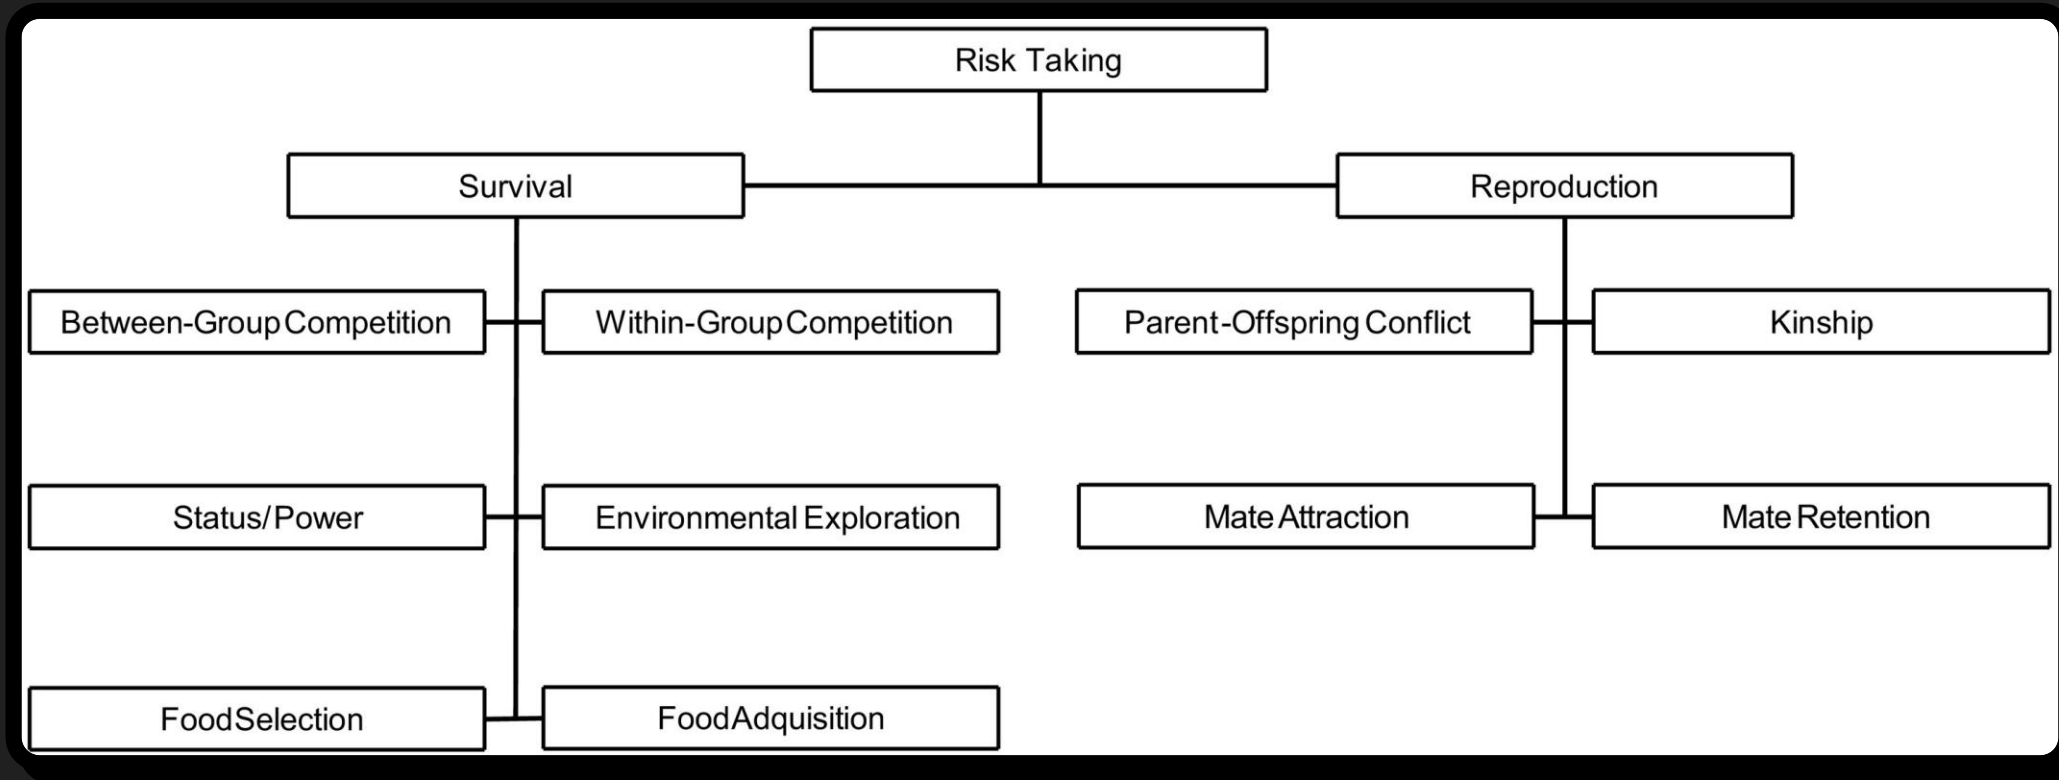

- “human behaviors are influenced by genetic coding and shaped by evolutionary adaptations to environmental challenges”
- roles are not fixed but are the result of natural adaptability

GENETICS

Evolutionary Theory: SO WHAT NOW?

Embrace the complexity of
our differences!

traits are not fixed but can **vary** widely
among individuals!

Human nature is a product
of both **evolutionary history**
and the **culture** in which we
find ourselves.

David Buss (2016)

Redefine what it means to
be human!

individuals can **transcend** traditional roles
and stereotypes

One is not born, but
rather **becomes**, a
woman

Simone de Beauvoir (1949)

EVOLUTION

Embracing the interplay of **biology** and **culture** (and **beyond**) empowers us to ~~break free~~ from stereotypes and celebrate the diversity of human identity.

EVOLUTION

The Challenge:

Celebrate the diversity of human identity.
